

Damage Prevention Software

Trusted. Supported. Innovative.

KorWeb

KorWeb is a web-based ticket management system used to protect underground facilities, prevent service interruptions, and allow excavators and homeowners to dig safely. The software increases efficiency in locating and ticket processing while cutting costs by eliminating unnecessary manual processes.

Our robust set of ticket management functions accommodate multiple locators and multiple geographic areas, all accessing their company data through one KorWeb database. The numerous convenient features that are standard in our software, along with the ample customization possibilities, provides a solution that makes business sense.

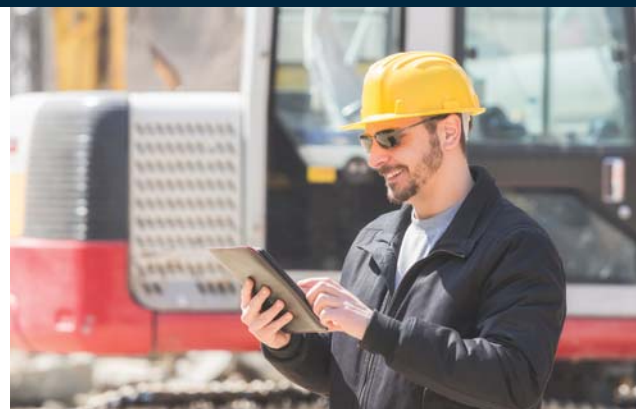

KorWeb Advanced

KorWeb Advanced provides all KorWeb features, plus additional advanced reporting and communications features. The software is designed for the exporting and analysis of specialized data for business intelligence purposes. Advanced reporting also allows management an in-depth view of company operations, which may help in decision making, cutting costs, and identifying areas of improvement.
