MAP-BASED ROUTING

Create a visual approach to your workload and generate cost-saving efficiencies by drawing your own polygons. Surpassing the traditional method of data-routed tickets, automated routing and dispatching provides real-time, geographically organized ticket information for each area, allowing you to quickly update your action plans and protect your facilities. This is a great way for medium to large companies to maintain their boundaries geographically.

Draw separate zones and run reporting on each, like number of tickets, ticket type, and marked vs cleared

Zone Identification

Draw polygons to establish zones across a specific geographic area, generate statistics for each zone, and set up automatic ticket routing accordingly.

Benefits

- Improve efficiency by automatically routing tickets to the best mobile in the field
