

Damage Prevention Software

Trusted. Supported. Innovative.

## KorWeb

### SKETCHING

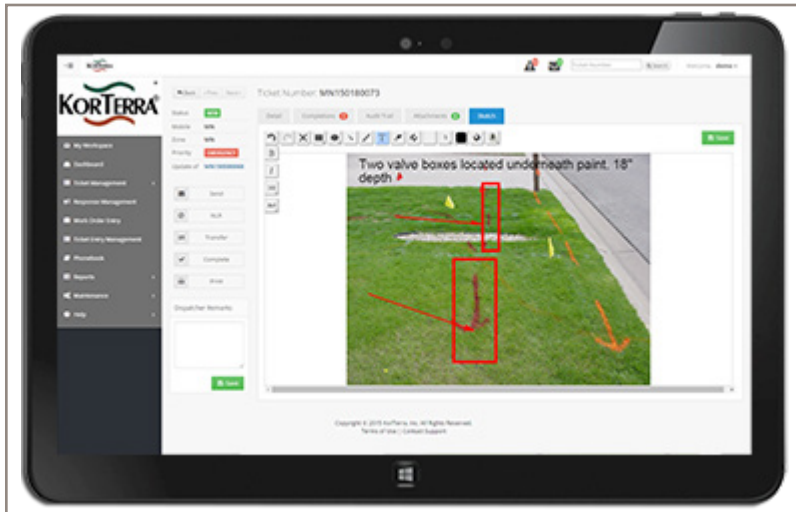

Render shapes, text, and custom drawings on any picture or map within a ticket. Sketching allows users to enhance pictures with their very own custom notations. These capabilities provide excavators with details regarding underground assets, improving safety and decreasing damages.

KorWeb also allows users to store these sketches in the cloud, ensuring they are easily retrieved.

### Image Clarification

Sketch directly from your phone or tablet to clarify anything you need to point out on an image. KorWeb stores sketches with the ticket itself.

Clarify the content in your images and other audit trail documentation with additional notes, shapes, arrows, or free-hand drawings.

### Benefits

- Adds clarity to otherwise vague photos or maps
- Saves time with ability to upload information from anywhere
- Improves the damage claims process
- Improves safety for excavators
- Reduces clutter storing everything in the cloud

### Features

- Add shapes, arrows, text, and drawings to photos and maps
- Sketch in free form or with predefined tools
- Notations remain attached to ticket for future reference

Contact KorTerra to find out how Sketching can help streamline your company's workflow.
